

BLOCKNUBIE

6 October 2020

Blocknubie.io

Today Blocknubie highlights the successful recruitment of 15 software engineers to strengthen its development teams who are engaged in transformative solutions for the healthcare sector.

Complementary Mix: In response to a recruitment advert outlining its plans to create transformative solutions in healthcare using machine learning and blockchain, Blocknubie were delighted with the calibre of the over 200 applicants. “It is a powerful combination,” said Loughlin Nestor, President at Blocknubie who drove the recruitment effort, “the desire to use advanced technology for the greater good is strong with engineers, and that comes across repeatedly during interview”.

AI is having tremendous positive influences in healthcare settings, with projects like CheXpert by the Stanford ML Group and BioMind demonstrating how AI can outperform human doctors at certain tasks. At Blocknubie, we believe our collective interests are best served by using AI to integrate with and strengthen existing healthcare systems with the absolute best of what new digital intelligence can bring. We value healthcare professionals, their skills, and services by supporting and augmenting them. Employing machines to perform repetitive tasks frees healthcare professionals to focus on what they have trained to do – listen to patients, exercise judgement and tailor individual treatments.

This belief resonated with the engineers we spoke to around the world and we are delighted that it attracted them to join our team to make a difference.

About Blocknubie: Blocknubie provides leading-edge Artificial Intelligence (AI) and Blockchain solutions to enable organisations to stay at the forefront of the technological revolution and to ensure that they maximise competitive advantage. Blocknubie’s AI solution provides organisations with the capability to analyse their data and take decisions with the aid of machine learning with a high degree of autonomy to achieve organisational goals. Blocknubie is to AI what Google is to information, what Netflix is to content and what Amazon is to online sales platforms. AI is a technology of strategic importance and a key driver of economic development. AI can solve many societal and corporate challenges. Blocknubie accelerates organisation’s success by unlocking the hidden value in data. Blocknubie’s AI platform provides the necessary infrastructure and technology to extract rich, actionable roadmaps from complex datasets. By scaling powerful product solutions to meet demand, Blocknubie’s systems keep costs low and performance high. Blocknubie makes AI affordable for everyone and is targeting a market projected by McKinsey to be worth \$13 trillion to the world economy by 2030.
